VAGINAL ECOLOGIX

TEST REPORTED: 27/09/2021
 TEST RECEIVED: 14/09/2021
 PATIENT NAME: SAMPLE PATIENT
 PATIENT DOB:
 GENDER: FEMALE

REPORT STATUS: COMPLETED
 CLINICIAN NAME: SAMPLE CLINICIAN
 ACCESSION NO:
 SAMPLE TYPE: VAGINAL SWAB

Lab Director:
 Eviatar Natan, PhD

Vaginal pH

RESULTS:

pH RANGE:

Vaginal Health Markers

RESULTS:

RANGE:

Lactobacillus

RESULTS:

RANGE:

Lactobacilli are extremely important for vaginal health due to their protective and antimicrobial functions. Lactobacilli produce lactic acid, creating an acidic environment (pH 2.8–4.2) that is inhospitable to many non-Lactobacillus commensals and potential vaginal pathogens. Dominance of Lactobacilli are therefore a good marker for vaginal health and indicate functional host-microbial interactions. Different people will have a different affinity with a certain Lactobacilli species, so we normally expect to see one of these species high on the test. Lactobacillus iners is normally less able to maintain the pH of the vagina than the other species, so in some cases it might be associated with an increase chance of a transitional microbiome.

Opportunistic Fungi

RESULTS:

RANGE:

			0 - 4	5 - 8	9 - 12	13 - 16	17 - 20	
<i>Candida albicans</i>	<DL							<3.4
<i>Candida glabrata</i>	<DL							<1.1
<i>Candida krusei</i>	<DL							<0.1
<i>Candida parapsilosis</i>	<DL							<1.5

Opportunistic Bacteria

RESULTS:

RANGE:

			0 - 4	5 - 8	9 - 12	13 - 16	17 - 20	
<i>Atopobium vaginae</i>	12.5	HIGH						<4.5
BVAB2	11.4	HIGH						<2.1
<i>Gardnerella vaginalis</i>	14.4	HIGH						<6.5
<i>Megasphaera 1</i>	14.9	HIGH						<1.3
<i>Mobiluncus curtisii</i>	<DL							<0.4
<i>Mobiluncus mulieris</i>	<DL							<0.5
<i>Prevotella bivia</i>	<DL							<6.0

Pathobionts

RESULTS:

RANGE:

			0 - 4	5 - 8	9 - 12	13 - 16	17 - 20	
<i>Enterococcus faecalis</i>	<DL							<3.8
<i>Escherichia coli</i>	<DL							<3.0
<i>Staphylococcus aureus</i>	<DL							<1.1
<i>Streptococcus agalactiae</i>	<DL							<3.0

Mycoplasma and Protozoa

	RESULTS:		RANGE:
<i>Mycoplasma genitalium</i>	<DL		< DL
<i>Mycoplasma hominis</i>	9.7	HIGH	<1.3
<i>Trichomonas vaginalis</i>	<DL		< DL
<i>Ureaplasma urealyticum</i>	1.9		<4.6

The Vaginal EcologiX™ profile utilises the highly sensitive quantitative PCR (qPCR) TaqMan technology for analysis of the vaginal microbiota. Microbial genes of interest are quantified within a sample and their abundances are normalised to an endogenous and highly conserved gene. The qPCR results are therefore reported as the relative abundance of a microorganism as proportional to the whole microbial community.
